There are authors who marvel at the first smiles of a baby, the first steps and the first words of a child, the first demonstrations of independence of the adolescent. Clarke is not one of them. For him, the baby is a strange creature only good for producing gurgling noises and excrement, the child is a machine for making loathsome father's day presents, and the adolescent a spotty and lethargic being who quickly make you regret the previous steps. With an acute sense of observation and amusing wickedness, Clarke will make all parents, who will not be able to deny that somewhere, he is right, smile (wryly). A cartoon book that will also provide food for thought to all future parents... which they will undoubtedly never become after reading this
